M&R’s Auto Fogger C™ feeds a highly atomized “fog” through easily adjustable delivery arms that can be positioned exactly where needed to keep High Solids Acrylic (HSA) and water-based inks from “skinning over,” or drying in exposed mesh areas.

Flow valves on each of the adjustable delivery arms allow operators to fine-tune the amount of fog being delivered to specific areas. The highly atomized “fog” is superior to “misting”-type nozzles, as the particles are so fine, they will not affect ink properties by settling or blending in with inks.

The Auto Fogger C uses a central storage tank that creates an ultrasonic vapor that feeds out to a multi-channel dispersion tube system.

**FEATURES**

- Ideally suited for today’s HSA and water-based inks
- Compatible with M&R carousel presses
- Industrial components for long-life, trouble-free operation
- Fully adjustable delivery system
